PATHOLOGIST REMARKS & CLINICAL INTERPRETATION:
1. Fasting and postprandial hyperglycemia with HbA1c of 8.2% indicates suboptimal glycemic control over the past 90 days. Clinical correlation with medication adherence and dietary regimen recommended.
2. Atherogenic dyslipidemia pattern noted: elevated Total Cholesterol, LDL-C, Triglycerides, and borderline low HDL-C.
3. Renal and Hepatic functions are currently within normal baseline limits.
